Laura García Diéguez

Senior Product Designer with 6+ years working on B2B and SaaS products, most recently at Gumroad, a marketplace where creators sell digital products. I like working across the whole process, from understanding the problem to staying involved through implementation, often with AI coding tools.

WORK EXPERIENCE

Senior Product Designer / Gumroad (Antiwork)

JAN 2024 - FEB 2026, Freelance | Remote, Async

- For most of this period, I was the **only Product Designer** for a team of 7 engineers with no Product Manager. Shipped 13 major features and ~35 improvements across Gumroad and Flexile, including Community, Installments, and new product categories.
- Designed **Tipping** in the checkout. Preselecting 20% added ~4.5% GMV, but creator feedback showed it pressured their buyers. We made "No tip" the default, which still added ~0.7% GMV.
- **Redesigned Gumroad's checkout payment UI** for desktop and mobile, a flow handling ~$2M in creator sales a week. Implemented it myself in React and Tailwind with AI coding tools in under two days, with one engineer fixing tests before merge.
- Led the audit that brought **Gumroad's Figma and Storybook design systems back in sync**, with one designer and one engineer. Names and visuals had drifted, and developers weren't sure which to follow. Reviewed ~20 components and opened implementation PRs. The public Figma file has 3.5k+ users.
- **Led Flexile's UI redesign** over 7 months, covering all ~40 pages of the app. Shipped 13 UI PRs myself, including dark mode, and co-authored 45 more: 20 with engineers and 25 by directing Devin, an AI coding agent. Designed complex workflows across equity, self-serve dividends and buybacks, invoicing, legal documents, and the GitHub integration.
- As the only designer, **reviewed UI in ~40 open-source contributor PRs** in Gumroad's first year as an open-source project. Built the frontend of several of my own features, including Instant Payouts, Payout Schedule, and Product Recommendations in the editor.

Product Designer / Gumroad (Antiwork)

JUL 2021 - OCT 2022, Freelance | Remote, Async

- Led the **Checkout redesign** from a single-product purchase page to a full cart experience: ~50 screens for desktop, tablet, and mobile, covering 4 payment methods and cases such as subscriptions, free trials, pre-orders, physical goods, gifts, and discount codes. Shipped with 3 engineers over 4 months.
- Designed Team Members, Product Recommendations, and the Discord integration.
- Contributed to the design system and the frontend.

EDUCATION

2019 | Madrid

UX / UI Design Bootcamp

2nd place at the Madrid Hackshow.

IRONHACK

2007-2010 | Sevilla

Bachelor's degree in Primary Education (Foreign Languages)

UNIVERSIDAD DE SEVILLA

SKILLS

User research, Prototyping, UI Design, Design Systems Documentation, Metric-informed iteration, Responsive design Accessibility

TOOLS

Figma, HTML/CSS, React, Tailwind, TypeScript, GitHub, Codex, Claude, Cursor

LANGUAGES

Spanish - Native
English - C1
Portuguese - B1

UX-UI Designer / Beezy (now Appspace)

JUN 2020 - AUG 2021, Full-time | Remote

- As one of three designers, built Nectar, **Beezy's design system from** scratch: tokens, naming conventions, component architecture, and a shared Figma library.
- Designed features for **Beezy's Microsoft 365 intranet**, such as the Hero Banner, Action Cards, and **Theater mode**: in two weeks, one modal to view documents, images, videos, and PDFs and comment side by side, without downloading files or switching windows.
- Built **Brandinator**, a Figma tool that automated custom branding for enterprise clients, and ran WCAG accessibility audits so branded instances stayed readable.

Junior - Associate Product Designer / Liferay

OCT 2019 - JUN 2020, Full-time | Remote

- As one of two designers on the design system team, designed components and icons for **Liferay's open-source design system**, and documented them in 15 merged PRs. On Figma Community, the design system file has 7k+ users and the icon set 7.3k+.
- With the research team, created a **heuristic evaluation method for Liferay products**.
