# Laura García Diéguez

**Senior Product Designer** with 6+ years working on B2B and SaaS products. I like working across the whole process, from understanding the problem to staying involved through implementation.

For most of my last two years at Gumroad, a marketplace where creators sell digital products, I was the only product designer, working with 7 engineers and no PM.

## WORK EXPERIENCE

### **Senior Product Designer** / Gumroad (Antiwork)

JAN 2024 - FEB 2026, Freelance | Remote, Async

- As the **only Product Designer** for most of this period, shipped 13 major features and ~35 improvements across Gumroad and Flexile, including Community, Installments, and new product categories.
- Designed **Tipping** in the checkout. Preselecting 20% added ~4.5% GMV, but creator feedback showed it pressured their buyers. We made “No tip” the default, which still added **~0.7% GMV**.
- **Updated Gumroad’s checkout**, a flow handling ~$2M in creator sales a week. Reordered the form to follow the buyer's natural flow, made the payment section responsive, and removed a redundant "Name on card" field. Built the payment form myself in React and Tailwind in under two days, with one engineer fixing tests before merge.
- Helped with the audit that brought **Gumroad’s Figma and Storybook design systems** back in sync, with one designer and one engineer. Names and visuals had drifted, and developers weren’t sure which to follow. Reviewed ~20 components and opened implementation PRs. The public Figma file has **3.5k+ users**.
- **Led Flexile’s UI redesign** over 7 months, covering all ~40 pages of the app. Redesigned the screens and updated the UI of its shadcn components, building some of them myself. Shipped 13 UI PRs myself, including dark mode, and co-authored 45 more: 20 with engineers and 25 by directing Devin, an AI coding agent. Designed complex workflows across equity, self-serve dividends and buybacks, invoicing, legal documents, and the GitHub integration.
- Designed and built the frontend of **Instant Payouts**, a paid option (3% fee) for creators to cash out their balance immediately, which paid out **$1M+ in its first ~3 months**. Also built Payout Schedule and Product Recommendations in the editor.
- **Reviewed UI in ~40 open-source contributor PRs** in Gumroad’s first year as an open-source project.

### **Career break** / Parental leave

OCT 2022 - JAN 2024

## EDUCATION

2019 | Madrid

UX / UI Design Bootcamp

2nd place at the Madrid Hackshow.

**IRONHACK**

2007-2010 | Sevilla

Bachelor’s degree in Primary Education (Foreign Languages)

**UNIVERSIDAD DE SEVILLA**

## SKILLS

User research, Prototyping, UI Design, Design Systems, Documentation, Metric-informed iteration, Responsive design Accessibility

## TOOLS

Figma, HTML/CSS, React, Tailwind, TypeScript, GitHub, Codex, Claude, Cursor

## LANGUAGES

Spanish - Native
English - C1
Portuguese - B1

### **Product Designer** / Gumroad (Antiwork)

JUL 2021 - OCT 2022, Freelance | Remote, Async

- **Redesigned the checkout** from a single-product purchase page to a full cart experience: ~40 screens for desktop and mobile, covering 4 payment methods and cases such as subscriptions, free trials, pre-orders, physical goods, gifts, and discount codes. Shipped with 3 engineers over 4 months.
- Designed **Product Recommendations** in the new checkout, which raised creator **GMV by ~2.5%**. Also designed Team Members and the Discord integration, and contributed to the design system.

### **UX-UI Designer** / Beezy (now Appspace)

JUN 2020 - AUG 2021, Full-time | Remote

- As one of three designers, built Nectar, **Beezy's design system from** scratch: tokens, naming conventions, component architecture, and a shared Figma library. After Appspace acquired Beezy, Nectar became the foundation of its Cosmos design system.
- Designed features for **Beezy's Microsoft 365 intranet**, such as the Hero Banner, Action Cards, and Theater mode: in two weeks, one modal to view documents, images, videos, and PDFs and comment side by side, without downloading files or switching windows.
- Built **Brandinator**, a Figma tool that automated custom branding for enterprise clients, cutting each client's branding from 1-2 days to an hour. Ran WCAG accessibility audits so branded instances stayed readable.

### **Junior - Associate Product Designer** / Liferay

OCT 2019 - JUN 2020, Full-time | Remote

- As one of two designers on the design system team, designed components and icons for **Liferay's open-source design system**, and documented them in 15 merged PRs. On Figma Community, the design system file has 7k+ users and the icon set 7.3k+.
- With the research team, created a **heuristic evaluation method for Liferay products**.

### **Primary School Teacher, Foreign Languages**

2013 - 2018

## SIDE PROJECTS

2026
