

Laura García Diéguez

I am a **Senior Product Designer and Design Engineer** bridging the gap between high-fidelity design and production code. I am an O-1B visa holder, recognized by the US government for extraordinary ability in design.

Experience

Senior Product Desinger and Design Engineer Gumroad (Antiwork)

Jan 2024 – Feb 2026 | Remote | Asynchronous | Open source

I bridge the gap between how a product feels and how it's built by working directly in **React** and **Tailwind**. I've moved away from traditional handoffs in favor of a fluid, code-first workflow using tools like **Cursor**, **VO**, and **Claude**. I also co-authored the **Gumroad Community Design System** to create a shared language for our team and developers.

Freelance Product Designer

July 2021 – February 2026 | Freelance | Remote

I've worked with BuidlGuidl to make **Web3** interactions feel more accessible and designed **specialized tools** like a daylight calculator for architects.

Product Designer, Gumroad (Antiwork)

July 2021 – November 2022 | Remote | Asynchronous

I owned the **end-to-end design** for core features in a **high-trust, transactional environment**. My day-to-day was spent turning complex merchant requirements into simple, intuitive workflows. In a high-**autonomy culture**, I worked closely with engineering to ensure our solutions weren't just visually polished, but technically sound and scalable for millions of users in the creator space.

Product Designer, Beezy (Appspace)

June 2020 – August 2021 | Full-time | Remote

At Beezy, I focused on making enterprise software feel less like a chore and more like a tool people actually enjoy. I spent much of my time architecting a **Design System** from scratch, ensuring every component was **accessible (WCAG)** and consistent. I also led our migration from Sketch to Figma, which was as much about improving our internal culture and speed as it was about adopting a new tool.

Product Designer, Liferay

October 2019 – June 2020 | Full-time | Madrid, Spain | Open source

Liferay was my first deep dive into **open-source** enterprise software. I worked on Lexicon, the company's **design system**, designing everything from core **UI components** to specific **iconography**. To ensure consistency at scale, I developed a **Heuristic Research** methodology to audit our products against our design guidelines.

Education Background | Montessori & Foreign Langauage Teacher

2013 – 2018

A decade of teaching provided a masterclass in behavioral observation and mental models. This foundation of empathy drives my UX strategy.
